

# Multiple prescriptions - One simple list

## For GPs and pharmacists

### How it works

1. GP/pharmacist initiates registration
2. GP/pharmacist gets patient/customer's consent
3. GP prescribes, pharmacist dispenses and patient collects
4. That's all there is to be done, as ASL automatically updates

- No more paper or tokens
- Clear view of active scripts
- Supports complex and chronic care patients

- Supports safer prescribing and dispensing
- Improved workflows
- Fewer missing scripts

Start the conversation with your patients and customers about Active Script List

**Remember:** check patient/customer contact details are up-to-date
